
Virtex-6, ISE 11

Ref : 004852A

Duration : 2 days

OBJECTIVES

- Learn how to effectively utilize Xilinx Virtex®-6 architectural resources.
- Master the CLBs and different type of slices structure.
- Master clocks resources (DCM, PLL and also global , area and IO clocks).
- Design effectively with block RAM and block DSP.
- Effectively use I/O blocks especially with SERDES blocks.
- Know the memory controllers
- Proper VHDL coding techniques.
- Introduction to the integrated hardware resources (Multi-Gigabit Transceivers, PCI-e, MAC Ethernet and System Monitor)

RELATED COURSES

- VHDL logical synthesis and simulation for Xilinx FPGAs Design (002572A)
- Designing for performance, ISE (002833A)
- Designing a LogiCore PCI-Express system (004552A)
- Designing with Ethernet MAC controllers (004553A)
- Designing with Multi-Gigabit Rocket-IO transceivers (002843A)

PARTNERS

- This training course is approved by XILINX

PREREQUISITES

- Basic knowledge FPGAs architectures.
- A successful first experience of designing an VHDL-based FPGA.

PRACTICAL LABS

Software configuration:

- Xilinx ISE Design Suite 11.1 Logic Edition

Recommended Hardware Configuration:

- Intel Core 2 or equivalent
- Windows XP
- 1 GB available on hard drive after software install
- At least 1GB of RAM
- Display Resolution : at least 1024 x 768
- For on site training, we need a video projector

Course also available
customized

Next sessions, see : <http://www.mvd-training.com/en/schedule.html>

TOPICS

1st day

- Virtex-6 family overview
- CLB and Slices architecture
 - Exercise
- Memory Resources
- DSP Blocks
 - Exercise
- I/O Blocks

2nd day

- I/O Blocks (continuation)
- Clocking Resources and management
 - Exercise
- Memory controller software core and MIG tool
- VHDL Coding techniques
 - Exercise
- Introduction to dedicated resources (MGT, PCI-e and EMAC)

DOCUMENTATION

Training manuals in print will be given to attendees during training.
